

Welcome to the Presentation on Overall and Annual Work Plan

under

FEASIBILITY STUDIES AND DETAILED DESIGN CONSULTANCY SERVICES (FSDD CS5)
CLIMATE-FRIENDLY AGRIBUSIESS VALUE CHAINS SECTOR PROJECT (CFACV)
28 January 2020

Scope of Works

Key activities involve:

- Rehabilitation of minimum 27 irrigation and water management infrastructure (off-farm irrigation systems), however not in TOR and PAM but highlighted to do about 800 on-farm water rainwater harvesting ponds, and 15 drip irrigation demonstration unit to climate-resilient condition;
- Upgrading agricultural cooperatives' value chain infrastructure (drying, processing and storage facilities), however not shown in TOR and PAM;
- Improving the connectivity of farms to cooperatives and markets through climate-resilient farm road networks of 250 km;

List of Packages for Irrigation Subprojects (1/2)

Year	Package Number	Province	Commune	District	Subproject Name	Command area, ha	х_итм	Y_UTM	Remarks

Overall Work Schedule

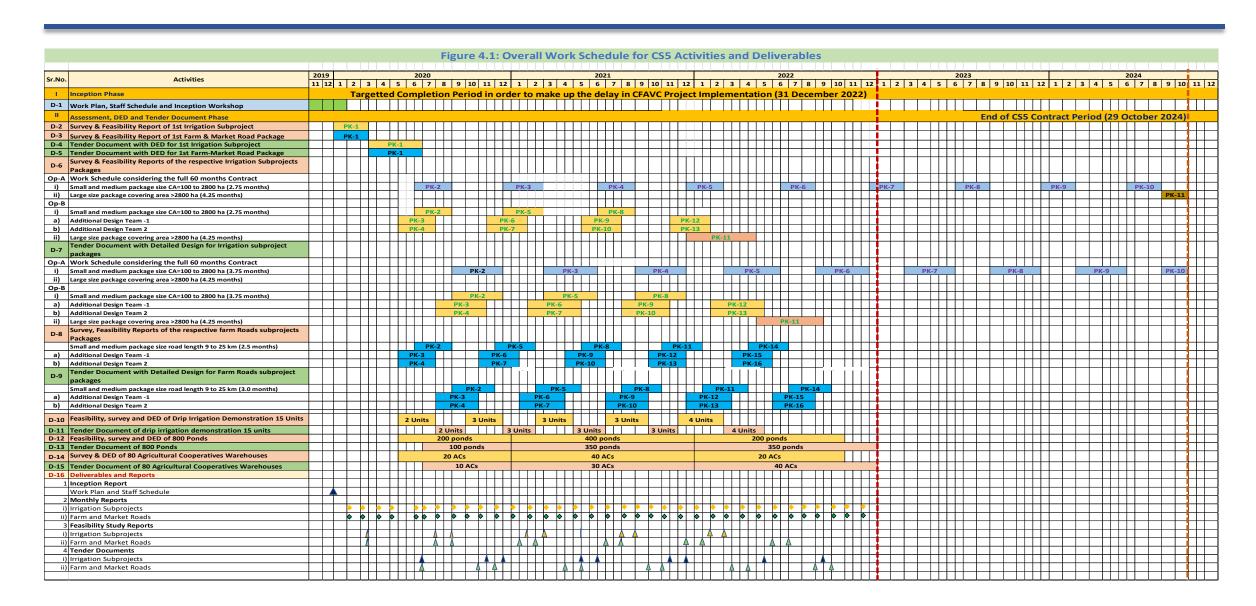

The overall work schedule is the reflection of Consultant's understanding of the project objectives, the scope of work defined in the Terms of Reference (TOR), PAM and in the Consultant's approach and methodology.

The Overall Work Schedule has five key components:

- i. Inception
- ii. Reconnaissance and Feasibility (subproject assessment)
- iii. Detailed Engineering Design
- iv. Tender Document
- v. Submission of Delivery and Reports

Overall Work Schedule (2020-2024)

Annual Work Schedule Year 2020 (3/3)

Issues and Constraints

Unclear Assignment Tasks and Issues in Irrigation Subprojects

ACTIVITY	PAM Content	ToR of CS5 Consulting Package	Issues/ Constraints
Design of Drip Irrigation Demonstration sites in Mango farms in Kampot and Takeo provinces	The PAM mentions the construction of drip irrigation demonstration units in farms with a size > 5 ha	the Terms of Reference of CS5	demonstration unit will require micro irrigation engineer (MIE) and currently there is no input for this position in CS5
Installation of 800 on-farm rainwater harvesting ponds	The PAM has a lot of requirements for the selection of the on-farm rainwater harvesting ponds and design of ponds.	water harvesting pond is not mentioned in CS5 ToR. However, review of Design	The design of ponds will require input of relevant engineer, who has knowledge in rain harvesting. The micro Irrigation engineer can be suitable for this, however as stated above, MIE is not in the current scope of CS5 Contract.
Agricultural Cooperatives (ACs), storage, Equipping with adaptation measures	The PAM has 80 ACs with installation of cleaning, drying and storage units.	measures are not mentioned in the CS5 ToR. However, the review of Design and	As the number of ACs are higher and they also need relevant equipment to install in storage units. For this a Community Development Engineer is required, currently such position is not in thes cope of CS5 TOR.

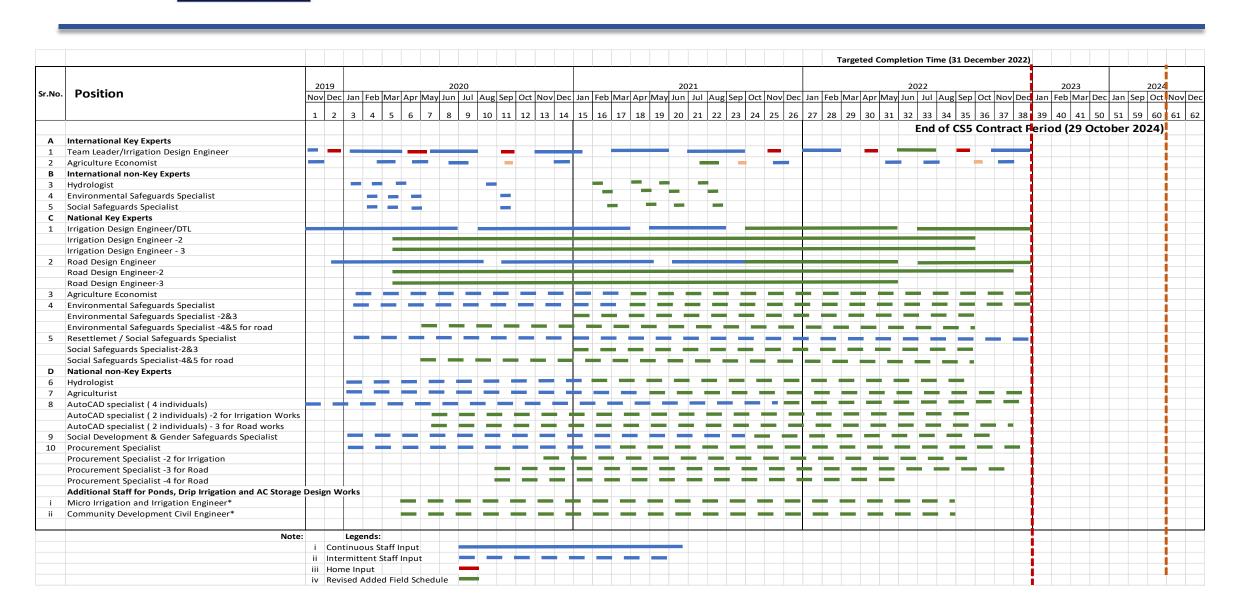

Deficient Man-months of Staff Positions

- ❖In accordance with the prepared work Schedule as shown in Figure 4.1 above, The work schedule considers the completion of FSDD − CS5 of CFAVC project by the end of 2022 at the suggestion from ADB during the kick off meeting on 5 November 2019. However, the contract completion period of CS5 is 60 months i.e. by 29 October 2024.
- In the work schedule in order to complete the FSDD works, all activities have been preponed and there needs 3 design team in parallel for irrigation and road subprojects.
- In the given condition, there are insufficient man-months for a number of staff position and the deficient staff man-months and their input time period are shown in the Slide Issues.
- Specially for lack of input if available from CS1 for social, environmental and procurement experts will address to some extent.
- However, this is critical at this moment.

Revised Staff Schedule for Planned Work Schedule
